

Net2 Support System Provides 100% Guaranteed Hacker, Virus, And Downtime Free Networks With Perfect First Year Results

September 1, 2004, Warminster, PA - Companies that are sick and tired of dealing with hackers, virus problems, and inept tech support finally got some much needed help this year. As a result, all regional businesses can breathe a sigh of relief when it comes to eliminating costly computer problems.

Net2 Technology Group, a regional leader in the technology consulting field for the last decade has just completed delivery of the first full year of completely virus, hacker, and downtime free computing "on record". Net2's "Virtual IT System" clients collectively saved over \$500,000.00 by completely eliminating costly emergency downtime issues. Additionally, their clients raked in average savings of over 45% on consulting and technical support services over companies who don't use the system, and more than 65% was saved over companies that have in-house support people trying to tackle these problems by themselves.

The Virtual IT System is Net2's flagship product offering. It's a collection of proactive maintenance and management tools, programs and protocols, organized and executed in such a way that it guarantees that the client's perimeter defense systems and network services cannot and will not be compromised. "Other IT companies could never keep my network running! Especially for one low monthly charge. We were always hit with the latest virus, losing thousands every single month. Since we've been using Net2's Virtual IT Service we haven't had even one network crisis, easily paying for the service", said of Glenn Christie, President of Allglass Systems in Penndel. Jim Canale, Net2's CEO said, "Technology has become so important that companies can easily be crippled by viruses and hacker intrusions. When I hear about people coming to work on Monday just to wait for computer help, I cringe. No one should ever go through that. I guarantee that none of my clients will, or I'll give them their money back and fix the problem for free".

Since its inception, Virtual IT Services has lived up to its promise and has not paid out one single dime to its clients in refunds. It has been paying its clients back for its cost though, by providing increased revenues by eliminating downtime and increasing technology workers' performance. The product's perfect record of preventing network downtime, virus infection and hacker intrusions ensures an always available computing environment which translates into a productive and revenue generating workforce.

Almost every business with 15-100 computers is able to take advantage of this system. More information about Virtual IT Services is available on their website at www.net2tg.com. To find out if Virtual IT Services is right for your business, call their office at 888-934-NET2 and set up an appointment with one of their Solutions Experts.
